Challenge Quality Policy

Challenge is committed to customer satisfaction and continual improvement.

Challenge Objectives

- Achievement of 100% On-Time Delivery performance
- Overall PPM Score of 25 or less
- Reduction of Scrap by 10% Annually
- Reduction of Rework by 10% Annually
EXPECTATIONS AND PHILOSOPHY

The procedures and policies defined in this manual will help support supplier efforts toward our shared objectives.

Challenge competes for business in the most competitive markets in the world. We must constantly improve our performance, our technologies, and our costs to remain competitive. Our suppliers are critical to our ability to succeed and must fully support our efforts in these activities.

The goals for Challenge and our suppliers are simple; be the very best at what we do and do it at the lowest cost. We must have the best quality, the lowest cost, and the highest level of customer satisfaction to survive and to ensure profitable growth. To achieve this we must have a highly flexible, highly motivated and highly robust supply base.

Challenge requires 100% On-Time Delivery from all suppliers. We expect “Zero” defects and rigorous continuous improvement from suppliers. We expect 100% on time and 1st time approval for PPAP from all suppliers. We expect “flawless” supplier launches.

Keith O’Brien
Keith O’Brien
Vice President- Operations
SECTION 1- Introduction

A. Policy and Vision

It is the policy of Challenge Mfg. Company LLC (“Challenge”) to utilize only those suppliers who can fully support our competitive goals, fully utilize the concepts of Continual Improvement, and strive to be number one in quality, delivery, and costs.

B. Purpose

The purpose of the Challenge Supplier Quality Manual is to clearly define the expectations and policies for suppliers to Challenge.

C. Scope

This manual applies to all direct material and service suppliers to Challenge. In addition, many of the policies and procedures defined in this manual apply to indirect material and service providers when indicated on the purchase order.

D. Responsibility

1. Suppliers are responsible for ensuring that they are using the most recent revision of the Supplier Quality Manual, and all other reference documents cited herein. This includes, but not limited to Customer, Industry, as well as Statutory and Regulatory requirements.
2. Suppliers are responsible for meeting the requirements defined in this manual.
3. Failure to meet these requirements may result in loss of existing or future business with Challenge. Any/all costs associated with supplier failures will also be the responsibility of the supplier.
4. Suppliers are responsible for 100% on-time delivery and “Zero” defects.
5. Suppliers are responsible for supporting Challenge continuous improvement activities.
6. Suppliers are responsible for supporting Challenge efforts and procedures for ensuring flawless launches, including on-time PPAP submissions. This includes compliance with any applicable Customer Specific Requirements for Program specific documentation or other requirements.
7. Suppliers are responsible for ensuring compliance to Challenge requirements throughout their respective Supply Chain.
8. Suppliers are responsible for developing and implementing part specific and executable contingency plans for ensuring continued delivery of product and services in the event of unplanned events including catastrophic events.

9. Suppliers are responsible for Annual Validation unless otherwise stated in writing.

E. **Challenge Supplier Quality Manual Availability**

The Challenge Supplier Quality Manual can be obtained on the Challenge website:  

[www.challenge-mfg.com/suppliers](http://www.challenge-mfg.com/suppliers)
SECTION 2- Challenge Supplier Requirements

A. Supplier Selection and Approval Process

1. ISO/ TS 16949 Registration
   • Suppliers to Challenge must be 3rd party certified to ISO/TS 16949 (Prevailing edition). Challenge customers have established TS16949 as the standard for the Automotive Manufacturing sector. In accordance with Challenge Purchasing procedures, Challenge may select a supplier which is only ISO 9001 Certified (prevailing edition). Challenge will also recognize ISO 9001 Certification for those suppliers that are not manufacturers, and therefore may not comply with ISO/ TS 16949
   • Suppliers must adhere to the appropriate AIAG standards. Requirements include: Production Part Approval Process (PPAP), Advanced Product Quality Planning (APQP), Potential Failure Mode and Effects Analysis (FMEA), Measurement Systems Analysis (MSA) and Statistical Process Control (SPC). This includes compliance to applicable “CQI” Standards for Special Processes (e.g. CQI 9, CQI 11, etc.)

2. Challenge Supplier Evaluation
   • All potential suppliers to Challenge must meet the minimum requirements defined in the Challenge Supplier Self- Assessment.
   • All potential suppliers will complete a self-assessment utilizing the Challenge Supplier Self- Assessment form. Upon review of the evaluation documents, Challenge Purchasing/ Supplier Quality will determine whether to accept the results of the self-assessment and/or conduct an onsite evaluation.

3. Preferred Supplier List
   • Suppliers will be considered for new business based on the classification on the Preferred Supplier List and the current rating at Challenge user plants.

4. Customer Dictated Sources
   • Customer dictated sources- Unless otherwise stated in writing by our Customer and Challenge Purchasing, Customer- directed sources must also comply with the requirements defined in this manual.
B. Supplier Launch Readiness

Suppliers will be required to follow a formal process for launching new product as defined in the Challenge Supplier Launch Readiness.

The process will include the steps identified in TS 16949 and the appropriate AIAG guidelines. Successful launches and launch documentation submitted on time will be key performance metrics for suppliers. Examples of some of the requirements defined in this process include:

1. Supplier Classification
   
   Supplier/Commodity is classified into categories, which define the level of Challenge participation, and the type of documentation a supplier must submit to support a new product launch.

2. Challenge 5-Phase Supplier Launch Readiness
   
   Challenge has a 5-Phase launch process for suppliers.
   
   The phases include:
   
   - Phase 1- Plan and Define
   - Phase 2- Process/Tooling development
   - Phase 3- Product & Process Validation
   - Phase 4- Production Launch Plan
   - Phase 5- Continuous Improvement Plan

3. Advanced Product Quality Planning (APQP)
   
   Suppliers to Challenge must meet the requirements defined in the AIAG-APQP Manual (Prevailing Edition). Specifically, Challenge requires suppliers to include process parameters in the PFMEA and Control Plans.

4. Production Part Approval Process (PPAP)
   
   Suppliers of Production Parts or Services must submit PPAP, with sample parts and documentation for approval, per AIAG-PPAP Manual guidelines. Written approval must be obtained prior to making Production shipment. PPAP submissions must be made to the Challenge Purchasing representative.
   
   All suppliers must submit to Level 3 (with Samples) unless notified in writing that another level of submission is permissible.
PPAP submission is also required when the process or tooling has been idle for a year or more.

IMDS submission must be made and approved prior to PPAP submission.

Any change to the Production Control Plan requires written notification to Challenge Purchasing.

5. Run @ Rate

Unless waived (in writing), Suppliers are required to submit Run @ Rate data to the Challenge Buyer. The Launch Team will determine Challenge participation.

6. Government Regulatory Compliance

Suppliers shall comply with all applicable governmental regulations and safety standards. Registration to ISO 14001 is strongly recommended. At a minimum, suppliers shall have a formal process in place to ensure compliance to government regulations, health and safety of employees, and a positive impact on the environment.

7. End-of-Vehicle Life Directive (ELV)

The European Commission implemented the End-of-Life Vehicle Directive (ELV) which prohibits the use of mercury, lead, cadmium, and hexavalent chromium in vehicles and components. The Directive is intended to minimize the impact of “end-of-life” vehicles on the environment. This is mandated for all European Union (EU) Member States and is also required by North American and Japanese vehicle manufacturers.

8. Material Reporting

Automotive companies require suppliers to provide detailed information for all materials used in their products. The format for this is the International Material Data System (IMDS). IMDS can be found at www.mdsystem.com. Challenge suppliers are required to complete IMDS submissions prior to PPAP.

9. Conflict Mineral Reporting

The term “conflict minerals” is defined as columbite-tantalite (coltan), cassiterite, gold, wolframite, tantalum, tin, tungsten, and any other mineral or its derivatives determined by the U.S. Secretary of State to be financing conflict in the Democratic Republic of the Congo (DRC) or an adjoining country.

When required, Challenge requires our Suppliers to certify compliance to applicable statutory requirements.
10. Packaging

Challenge and the supplier will agree upon packaging during Phase 2 of the Supplier Readiness Process. The Challenge Packaging Information Form will be used to define the packaging details, and record submission and approval of Packaging parameters. Wherever possible, returnable packaging will be utilized. Suppliers are responsible for developing contingency packaging (expendable) should the returnable containers not be available.

Basic requirements will include:

- All packaging must have a proper label that complies with AIAG barcode label guidelines. The labels must include the following information at minimum:
  - Challenge Part Number with engineering change level and description
  - Number of pieces/quantity
  - Supplier name and/or supplier code
  - Lot Control/Traceability information (refer to Paragraph 11 below)
  - Part specific information that may be specified by Challenge

- There shall be only one part number in each container and only one part number on each pallet. (Unless otherwise agreed upon during Phase 2 planning with the Challenge Launch Team)

- Packaging must be robust enough to protect the component/materials and prevent damage or contamination during shipment. Challenge may require formal, independent testing

- All Packaging materials must comply with ISPM-15

11. Lot Control and Traceability

Lot control and traceability are essential requirements for suppliers to Challenge. The size of the lot reflects the amount of risk should a problem with product occur and therefore must be managed accordingly. Traceability must include the Manufacturing date, and the means to trace other critical processing streams (e.g. Heat Treat Lots, Assembly Cells, Cavities, etc.), as required for effective product identification.

12. Supplier Management Process

Suppliers must have effective systems in place to ensure that services, incoming materials, and components from sub-contractors meet all requirements.
C. Continuous Improvement Process

1. Supplier Performance Reporting

Challenge will update supplier performance quarterly and publish as needed. It is the supplier’s responsibility to communicate the importance of these metrics within their organization. It is also the supplier’s responsibility to develop an improvement plan and implement the required improvements.

It is the goal and expectation that Suppliers to Challenge maintain “Zero” PPM and 100% On-Time Delivery. Supplier Corrective Action Request (SCAR) and/or other remedial actions may be implemented for any occurrence that can put these above 25 PPM or below 90% on-time delivery. In addition, suppliers will be monitored for on-time PPAP and APQP events and 1st time approval rate for both processes. Suppliers may also have, and be required to support—specific objectives for cost improvement, engineering support, and Electronic Data Interchange (EDI) functionality.

2. Concern Management/ Problem Solving

Challenge Supplier Corrective Action Request (SCAR) defines requirements and expectations for suppliers regarding problem solving, Root Cause Analysis and Corrective Action. The SCAR outlines a disciplined, formal approach for problem solving and specifies the approach required for each step of the 8D process.

The SCAR process applies to all suppliers of production material, parts, subassemblies, or services. Suppliers will utilize the SCAR for resolving any/all issues including quality related problems, delivery related problems, late submissions, and other issues identified in this manual and on the Challenge purchase order.

Supplier Corrective Action Request (SCAR) Response Requirements:

- Initial Response—24 Hours
- Short Term Corrective Actions (Including Containment)—48 Hours. Must include written confirmation of a Return Material Authorization (RMA) number.
- Completed/Verified Long Term Corrective Actions—2 weeks

3. Escalation of Issues

Challenge requires Suppliers to ensure that all material, services, and processes are in conformance to all specifications and requirements. This includes adherence to the defined delivery schedule. Repeat product and/or process issues, launch or delivery
disruptions- may require the use of Controlled Shipping at the expense of the Supplier. Challenge uses an escalation process for repeat occurrences. A Supplier failing to protect a Challenge facility from repeated incidences will be subject to the escalation process, up to and including resourcing.

4. Controlled Shipping

Challenge may determine that special measures are required to ensure adequate quality and delivery performance.

Controlled Shipping is a requirement by Challenge for a Supplier to add a separate, redundant inspection process for containment of a specific non-conformance, while implementing Corrective Action(s). The containment activity is in addition to normal controls and should be completed in a separate, controlled area. Submission of the sorting data showing inspection results is required. The data obtained from the redundant inspection process is critical as both a measure of the effectiveness of the secondary inspection process and the Corrective Actions taken to eliminate the initial non-conformance.

Challenge will notify the Supplier when they have been placed in Controlled Shipping. Examples of criteria for a Supplier being placed on controlled shipping may include the following:

- Repeat quality performance issues
- Product nonconformance during Launch
- Repeat Shipping (e.g. count, labelling, etc.) discrepancies

Two levels of Controlled Shipping exist

- Level 1 includes a problem solving process as well as a redundant inspection process. The Supplier’s employees at the Supplier’s location enact the inspection process in order to isolate the Customer from receipt of non-conforming parts/material.
- Level 2 includes the same processes as Controlled Shipping Level 1, with an added inspection process by a third party representing Challenge or our Customer. The third party is selected by the Supplier, approved by Challenge, and paid for by the Supplier. Continued failure to meet expectations could result in removal from the Approved Supplier List.
Note: Suppliers at CS level 2 are not permitted to bid for new, existing or transfer business unless notified by either the plant or Challenge Purchasing. Other measures may be required if level 2 controls are not effective.

Criteria for exiting Controlled Shipping Level 1 or 2:

- Challenge will make the determination whether the Supplier can effectively correct the nonconforming material situation through the normal corrective action process and isolate Challenge from the problem.
- Application for an Exit Letter from Level 1 or 2 will be reviewed and approved by the Challenge plant, provided all of the criteria has been met, and action plans have been completed and validated.

5. Supplier Cost Recovery

Suppliers are responsible for the quality, on-time delivery, and reliability of the product they supply. Product must meet all design and specified requirements. The Supplier accepts financial responsibility for the consequences of nonconforming product and rejected PPAP submissions. This includes, but is not limited to, costs incurred for containment, sorting, premium freight, rework, repair, and replacement of defective material, resulting overtime, and productivity loss incurred by Challenge or by Challenge customers.

- Charge Back Debit

The method of charge back will be by debit memo, processed by Challenge Mfg Purchasing.

- Changes

In cases where a Supplier has implemented an unauthorized change or has failed to deliver contracted products in accordance with the specifications and terms of the Challenge Purchase Order, all cost that are incurred by Challenge and/ or its Customers will be the sole responsibility of the Supplier.

6. Supplier Request or Engineering Change (SREA)

Any changes to process or product must be approved by Challenge in writing. Prior to production shipments of the change, PPAP submission will be required. Failure to obtain written approval before any change is implemented will be viewed as a nonconformance. It can also result in immediate loss of the existing business.
7. Annual Validation
Suppliers are required to submit Annual Validation for all Production Parts or Services on or before the anniversary of PPAP Approval.
Unless otherwise specified in writing, all Annual Validations must be submitted utilizing the AIAG PPAP format and criteria for completion.
No Challenge approval is needed, as long as the Part Submission Warrant (PSW) states Reason for Submission is listed as Annual Validation.

8. Business Continuity Planning
It is expected that Suppliers to Challenge prepare a Business Continuity Plan for the all Products/Services on contract (Business Continuity Planning checklists and templates can be found at the AIAG or SAE websites). This plan ensures that suppliers are prepared for natural disasters and man-caused events that can disrupt business practices. A contact list with alternate and “all- hour” contacts is required. The plan and lists (including updates) must be provided to Challenge Corporate Purchasing and the appropriate Contact Lists to Challenge user plants.

9. Records and Sample Retention
Records or Sample Retention must comply with the appropriate statutory, regulatory, industry and/ or Customer standard.

D. Verification of Purchased Product
Challenge representative and/or our customer’s representative shall be afforded the right to verify at the supplier’s premises that the product/services conforms to specified requirements.
Such verification shall not be used by the supplier as evidence of effective control of quality by the supplier. Verification by Challenge or our customer shall not absolve the supplier the responsibility to provide acceptable product, nor shall it preclude subsequent rejection by the customer.
